“

Immunat Herbal Pharmaceuticals Inc. was founded in 2008 in Yalıkavak, Bodrum by Adnan Akar, within a 2,000 m² enclosed facility. In our factory, equipped with state-of-the-art machinery and operating in a completely hygienic environment, we process more than 200 endemic plants for the pharmaceutical industry. We are proud to be recognized as the first and only company in Turkey qualified as a producer of herbal pharmaceuticals.

With the support of our consulting physicians, specialists, and our collaborations with esteemed academics, doctors, pharmacists, and chemists, we produce at a scale that meets the needs of both the phytotherapy sector and the cosmetics and pharmaceutical industries across Turkey.

Adnan Akar

”

From the Chairman of the Board

As Immunat Inc., we are pleased to present for your consideration our newly developed product, Animal Spray, successfully completed through our R&D and production processes.

Our company operates under the supervision and control of:

- The Ministry of Agriculture and Forestry of the Republic of Turkey for dietary supplements and herbal active ingredients,
- The Ministry of Health of the Republic of Turkey for cosmetics production,
- The Ministry of Industry and Technology of the Republic of Turkey for industrial activities,
- The Ministry of Trade of the Republic of Turkey for commercial activities.

At Immunat Inc., in addition to producing herbal liquid extracts that support the metabolic health needs of living beings, we also develop innovative solutions against threats such as environmental factors, hygiene deficiencies, and risks of infectious microorganisms.

In this context, Animal Spray, one of the five products specially developed for our U.S. subsidiary Immunat USA LLC, has been formulated with both animal health and human contact in mind.

The primary objectives in developing Animal Spray are:

- Preventing bacteria, bad odor, viruses, fungi, and parasites in animal habitats and contact areas,
- Minimizing the risk of cross-contamination after human-animal contact,
- Supporting wound healing by preventing infections in veterinary applications,
- Providing safe usage across a wide spectrum, including skin, open or closed wounds, paws, feeding bowls, and living spaces.

Additionally, our product:

- Is non-toxic even when in contact with food and drinking water,
- Comes in different packaging options for domestic and international markets,
- Has shown 99% effectiveness in university laboratory tests,
- Holds the distinction of being the first product registered by the Veterinary Services Department of the Turkish Ministry of Agriculture and Forestry.

For veterinarians, Animal Spray offers both ease of application and commercial value. We would be pleased to receive your feedback and collaboration proposals regarding this product.

Sincerely,
Adnan Akar
Chairman of the Board
Immunat Herbal Pharmaceuticals Inc.

Animal Spray – The Story of Firsts

Every innovation and breakthrough begins with a need.
Our animals... They are the joy of our homes, the abundance of our farms,
the silent guardians of our streets.

For us, they are not just companions but, like us, a part of nature.
Touching them, living with them, fills our lives with love and peace.
But this close contact, often without us realizing it, can bring along invisible risks.

This is where Animal Spray steps in - the **first veterinary hygiene product** produced with the approval of the **Ministry of Food, Agriculture and Livestock** - designed to protect both animal health and human health.

This story began in Bodrum.
Adnan Akar, CEO of Immunat Inc., who has dedicated years to the field of herbal formulations, set out with the vision of developing a product that is not only effective but also safe, natural, and innovative.

Months of R&D, countless formula trials, meticulous testing considering every possible use case...

And at last, a special results-driven formulation emerged — honored as the first of its kind in Turkey.

Animal Spray:

- **99% effective** against bacteria, bad odor, viruses, fungi, and infections,
- Safely applicable on paws, fur, wounds, living areas, and **even genital regions**,
- Entirely harmless even on surfaces in contact with food and water bowls,
- Supports the healing process,
- Provides dual protection against microbiological threats - safeguarding both animals and humans.

This product redefines the concepts of hygiene, care, and biosecurity. From homes to shelters, from veterinary clinics to farms — wherever there are animals, Animal Spray is there.

For pet owners: Secure protection for beloved companions.
For veterinarians: Professional ease of application and treatment support.
For the sector: A new market standard and leadership opportunity.

Born in Bodrum, this vision is now crossing borders. Because **Animal Spray** is not just a product; it is the name of **a new era** in animal health - a revolution of dual protection in human-animal contact.

Animal Spray - For beloved companions, safe moments to share.
